SIMPLY INDESPENSABLE

## Extraordinary performance and reliability

The Deutz-Fahr Agrolux series is built specifically for sturdiness and reliability. Available with two power variants, these are extremely productive tractors that can cater for a vast range of applications.

Well suited to any fleet operation, the controls are logically laid out.

Their simplistic design and operation makes them a popular investment as their daily servicing and operating costs are minimal. Drawing on the key strengths of the Deutz-Fahr range, both models offer true 4 wheel braking and 100% locking differentials. These safety features offer piece of mind when they are put to the test in hill country or fencing applications. Furthermore their frame design makes these units an ultra-maneuvrable tractor.

Agrolux tractors were originally designed for small to medium sized farms, or to complement the existing machinery pool from a larger established operation.

They can be configured for row crop and specialist work. The SDF engine delivers impressive torque even at low engine speeds for outstanding flexibility (while maximum torque is produced at 1600 rpm).

The Agrolux range has a highly efficient transmission providing excellent PTO horsepower performance and a great power to weight ratio.

## Compact format meets innovation

Around the yard and for light field work – the new 4E Series is the ideal tractor for smaller farming operations and a great addition to any fleet operation, municipal and row crop role.

The tried and trusted SDF 1000 series engine offers a maximum output of 80 HP. Deutz-Fahr has developed the front axles specifically for the utility class with a 55° steering angle, differential locks and four-wheel drive with electro-hydraulic activation, four-wheel brakes – the new 4E Series is both agile and stable.

The new cabin meets the highest standard of comfort with a flat floor and wide opening doors giving a feeling of space and clear uninterrupted vision in all key areas. The B pillars are set rearward of the driver to make sure lateral vision is not obscured. An all new dashboard provides clear information about all the operating parameters of the tractor whilst the adjustable steering column and drivers adjustable seating position further enhances the idea of size in the cabin.

The attachment points offer outstanding versatility including a lifting capacity of up to 3,500 kg. A comprehensive dual pump hydraulic system provides dedicated oil to key parameters of the tractor such as the steering and lubrication to the transmission whilst the dedicated pump can cater for key services such as the rear hitch, front end loader and or rear remotes. Coupled with a Stoll Loader, the 4E series is the perfect solution to a range of tasks.

## Deutz Tackles Tough Country with Ease

**Nathan Wright is the 3rd generation of a family business that has operated in the Waerenga area of the North Waikato for more than fifty years.**

Today, the 1300ha operation is split over several blocks in the area that are largely hill country, while also being complimented by around 80ha of flat to rolling land at the base of the hills to the east. The operation focuses on dry stock, centred around contract rearing of calves and taking stores to 500kgs before leaving the property.

As one would expect for such a property, the need for a reliable utility tractor is a must, and in this case, falls to Deutz Fahr. Previously, the business ran a SAME 75 tractor that came from the parent company of Deutz Fahr- the Same Deutz Fahr Group.

When it came time to look for a replacement for the old tractor, it obviously made sense to look at Deutz Fahr and the local dealer Power Farming Morrinsville. Nathan Wright comments, "The little SAME spent most of its life on our post driver- an essential part of the operation. We liked the four-wheel braking system because it inspires confidence and makes for safe operation on our unforgiving hill country."

The chosen replacement, a Deutz Fahr Agrofarm 100G, carries this key feature over but also goes on to deliver a host of other features. Power is provided by a 4-litre/4-cylinder turbocharged engine that pushes out 96hp/ 342 Nm torque, so has plenty of power and low down "grunt" to tackle the steepest

parts of the property. Servicing is easy, with a one-piece hood allowing easy access to all the daily check points, while an under-hood silencer offers great visibility in the awkward terrain.

Transmission choice is an impressive 40F/40R speeds, from as low as 0.3kph to 40kph, meaning travel between blocks is quick, while also retaining a wide choice of speeds for jobs in the paddock. Add to this a low centre of gravity, 100% locking diffs and the already mentioned four-wheel braking and the Agrofarm has the agility of a mountain goat.

At the business end of the tractor, the 4.2 tonne lift capacity handles the post driver with ease, while the open-centre hydraulic system delivers a useful output of up to 55 litres/minute.

Living with the tractor day to day sees a semi-flat platform and a ROPS safety frame, with Nathan noting, "The tractor is easy to get on and off, a regular occurrence when encountering the numerous gates' you can expect on a livestock operation."

Nathan goes on to say, "Buying a tractor that had the same unique braking system made real sense for us, alongside the Agrofarm offering really good bang for our bucks. As you might expect with a modern tractor, we had a few niggles when it first arrived, but the subsequent service we received from Power Farming Morrinsville was first-rate. The tractor has become an essential part of our operation, getting to some really gnarly places, so we'd have no problem with recommending it to anyone in a similar situation."

## DEUTZ-FAHR AGROFARM 100

- 96HP SDF 1000 Series 4-cylinder engine
- 40F + 40R transmission wet clutch powershuttle
- 4 range, 5 speeds with Hi-Lo splitter in each
- Flat operator platform
- True oil immersed disc brakes on all four wheels
- Wide footprint for better stability on hills
- User friendly comfort clutch
- Choice of either 2-post ROPS frame or spacious 4-Post air conditioned cabin

## Power Performance and Style

In the 38 years Doug Haigh has owned and developed his coastal Taranaki dairy farm he has learnt a thing or two about finding machinery that is up to the task. And in his two 5 series Deutz Fahr tractors, he reckons he has found tractors that definitely make the grade.

Doug's runs his Farming business, Haigh Farms Limited, alongside his son Nathan and wife Angie. They milk 523 cows on 218ha, in country many would consider 'challenging'.

The Rahotu Lahar country sits directly under Mount Taranaki and is iconic for its lumps and hills, covering a huge area of the coastal region. Flat workable land is hard to find here, so like many farmers in the region, Doug set about making his own. For many years he hacked at the ground with dozers, diggers and discs, producing what is now a very productive piece of land.

Now the farm is established, Doug spends a lot

of his time in the seat of one of his two 5 series Deutz Fahr Tractors, a 5115, and a 5120. There is much less time spent knocking down hills, and more time working the paddocks he has created. Main duties include fertiliser application, mowing and topping, undersowing with his Aitchison direct drill and loading his new Jaylor mixer wagon.

"I like them" Doug states. "We've got some funny country to deal with here and a tractor needs to be able to hang on to the hills. The Deutz is stable and will climb anywhere I want to go". They have a comfortable cab and are easy to get in and out of. I spend a lot of time loading the mixer wagon and they have no trouble getting feed over the top, visibility is good too".

Doug explains that with their feed program, their machinery has to keep moving, and in his tractors he has had no cause for concerns. "They go well - I can count ten or eleven of them nearby to us, so that tells you something!"

## DEUTZ-FAHR 5104.4

- 102HP FARMotion 4-cylinder Tier 4i diesel engine
- 40F + 40R transmission with wet clutch powershuttle
- 4 range, 5 speeds with Hi-Lo splitter in each
- Heavy duty front axle
- Stop & Go for clutchless operation
- Adjustable wheel equipment
- True oil immersed disc brakes on all four wheels
- Spacious 4-post air conditioned Cabin
- 3 rear hydraulic remotes

# Improve your productivity

Take your tractor to the next level with Deutz-Drive, a range of affordable options to give your farming operation the benefit of precision farming.

Upgrade your existing Deutz-Fahr to improve decision making and improve traceability while enhancing the value of your tractor. Match your farm practices more closely to crop requirements, reduce your farms environmental footprint while boosting performance of your farm by improving management of fertiliser usage, seeding, drilling, planting and monitoring of other farming activities.

- 3 integrated options available
- Suitable for all Deutz-Fahr cabin models
- A range of correction sources available (Autonomous, Topnet Global D, OmniSTAR and RTK)
- ISOBUS compatible
- Section and rate control compatible
- Produce more with less, maximise efficiency and operate more profitably
