6 DT SERIES

4 CYLINDER UTILITY TRACTORS

FREE TRIMA LOADER

The 4 cylinder 6 Series has the power to get the job done

The 6 Series 4 cylinder range provides the best technology mix in its class. Deutz-Fahr has expanded its series offering two models with the 6130 (126hp) and 6140 (136hp), each of which are available with TTV or PowerShift transmissions.

From ploughing, sowing and cultivating to transporting, harvesting and front end loader work, the 6 Series tractors are as versatile as your daily work is varied.

Maximum manoeuvrability, supreme efficiency and unparalleled operating comfort are trademark features of the Deutz-Fahr 6 Series.

Like the 6 cylinder 6 Series, the high horse power 4 cylinder tractors come with powerful hydraulic systems as well as a range of hydraulic attachment points at the front and rear.

Ultra-efficient FARMotion 3.8 litre engines (Tier 3) with an output from 126 to 136 hp (95 to 100 kW), ensure characteristically high performance and low fuel consumption.

The spacious cab provides the high level of operating and driving comfort that Deutz-Fahr is renowned for. With five specification variants in the range, Deutz-Fahr has added even more options to the technology mix. Comfort and quiet are essential for drivers who work long days and nights. Deutz-Fahr addresses these important issues; the 6 Series models are fitted as standard with cab suspension and double glazing that reduces noise and vibrations by up to 40%. The work space of the 6 Series 4 cylinder tractors boasts an impressive design. All of the controls for the engine, transmission, power take-off, hydraulic control valves and the lighting package, as well as the MMI for the InfoCentrePro are within easy reach, built into the side console to the right of the driver. The TTV models are operated using the new MaxCom joystick on the right armrest. The new InfoCentre Pro integrated into the steering console features a 5 inch colour display. This provides the driver with a continuous flow of information about the operational status of the tractor.

DEUTZ-FAHR 6130/6140

- Five heavy duty four-cylinder models from 126-136 hp offer plenty of options to suit a range of applications
- Choice of either a 3 speed semi-powershift transmission with auto power shifting function or Deutz-Fahr's very own in-house manufactured TTV continuously variable transmission for the ultimate in efficiency and operator comfort
- Choice of either 40km/h transmission at super economy engine speed on fixed front axle models, or 50km/h transmission on models with suspended front axles
- High flow hydraulics with 120 L/min closed circuit load sensing hydraulic pump standard on all models
- Four electro-hydraulic remotes standard across the entire series with electronic flow and timer adjustment
- Fully hydrostatic independent 4-wheel braking and 100% front and rear diff-locks
- Double displacement steering system for reduced turns of the steering wheel to go from full-lock left to full-lock right
- Front end loader can be integrated into the tractors pre-existing hydraulic controls for a factory fit and finish

UPGRADE TO A STRATO MODEL TO INCLUDE THE ABOVE FEATURES PLUS:

- Hydraulic trailer brakes
- 50km/h transmission
- Front suspension
- Power beyond

6G SERIES

6 CYLINDER TRACTORS

Next level productivity from the highly economical 6G series

The Deutz-Fahr 6G Series tractors have raised the bar for styling, technology and productivity for modern high horsepower tractors.

Building on a family look already seen in the existing 6RC and 6TTV models, the 6G replaced the M Series, and is turning heads up and down the country due to the broad base of standard features and the option to specify upgrades to meet individual circumstances.

Looking at the range in more detail, the six variants, designated 6135G, 6155G, 6185G and 6205G offer maximum engine outputs of 141, 163, 190 and 203hp respectively. That power is delivered by a proven Deutz TCD 1012, 6-cylinder engine that meets Tier 3A emission regulations, thereby removing the need for any after treatments such as SCR or AdBlue, but still delivering fuel economy that competitive manufacturers dream about.

Those models are further split into Vista and Summit formats, with the latter including a new adaptive front suspension

system with 120mm travel, anti-rise and anti-dive systems, locking diff and 50kph capability, while the Vista sees a new rigid front axle, limited slip diff, and 40kph.

The ZF-sourced transmission features 30F and 15R speeds, delivered by 5 ranges and 6 power-shift steps, providing automated powershift changes, while the 6185G and 6205G, also benefit from automated range changes. Auto-shifting is based on engine load, so a simple dial up control allows operators to change shift points to suit a range of tasks that might include the heavy draft forces of cultivation, or the PTO loads imposed by baling.

Ease of use is also the forte of the Sense Clutch function incorporated into the forward/reverse power shuttle operation, where a choice of five easily adjustable settings control the aggression of the clutch bite-point. In the hydraulic department, Vista versions utilise an open-centre system with up to 110 litres per minute flow, while the Summit delivers up to 125 L/min via its CCLS hydraulic pump.

FOR BUSINESS OWNERS WHO DEMAND A TRACTOR THAT NOT ONLY DELIVERS PRODUCTIVITY BUT IS ALSO INEXPENSIVE TO RUN AND EASY TO USE

DEUTZ-FAHR 6185G/6205G

- Powerful high horsepower utility tractor suitable to a range of tasks
- 6.1 litre 6 cylinder Deutz AG engine with tier 3A provides excellent power and torque delivery over a broad rev range for honest and true performance characteristics with minimal power loss
- RC-Shift transmission with 5 ranges and 6 powershifts in each range
- High-flow hydraulics with 125 L/min closed circuit load sensing hydraulic pump
- Suspended front axle for enhanced comfort and 50km/h max travel speed
- Armrest control with multifunction joystick keeping all regular functions in easy reach
- Simplified operation to suit a wide range of operators both as a fleet machine or as a primary workhorse

UPGRADE TO A SUMMIT MODEL TO INCLUDE THE ABOVE FEATURES PLUS:

- Four pairs of remotes with flow control
- Additional lighting package
- Creeper transmission of 54 x 27 speeds
- Upgraded seat package
- Front suspension with 50km/h road speed

6 PRO-SERIES

PROFESSIONAL RANGE

FACTORY FITTED GPS AVAILABLE

The perfect fusion between technology and design

The 6 Pro-Series is engineered with built-in efficiency in every single system and with minute attention to detail in every component, instrument. These machines are extraordinarily productive.

With powerful Deutz engines, the choice of tried and tested Robotised (RC) or continuously variable transmissions (TTV) and instantly recognisable, attractive style by Giugiaro Design with clean, bold lines and the choice of Summit or Strato specifications the 6 Pro-Series sets the standards for others to follow.

A wide choice of configurations cover a vast spectrum of applications; from tillage, seeding, crop treatment and harvesting to efficient trailer work. The extraordinary versatility of the 6 Pro-Series makes it perfect for both farmers and contractors alike.

Under the bonnet it features state of the art solutions for maximised performance. The new Deutz 6.1 Tier 3A utilises

modern technology and is engineered and manufactured in Germany – synonymous with the highest levels reliability and efficiency, allowing you to achieve maximum output. This new engine is more responsive, offers higher reserve torque and at the same time, fuel consumption has been further reduced from previous variants. The revised exhaust system excludes the need for SCR and DPF exhaust after treatment. This saves fuel and money whilst also negating the need to use after treatment additives (AdBlue).

Add to this the choice of either a robotised shift system – letting the driver select all six ratios simply from the joystick without pressing the clutch pedal or shifting with a normal lever, or choose TTV giving you an uninterrupted infinite range of speeds from 0-50km/h. Industry leading cabin comfort and with a large range of excellently specified models, we have a 6 Pro-Series that will keep your business growing.

EVERY DETAIL OF THE 6 PRO-SERIES IS DEVELOPED TO CATER FOR THE NEEDS OF FARMING BUSINESSES AND AGRICULTURAL CONTRACTORS, AND BUILT TO DELIVER IMPRESSIVE PERFORMANCE MATCHED WITH LOW FUEL CONSUMPTION

DEUTZ-FAHR 6155RC/6165RC

- The 6155RC and 6165RC professional series tractors are built with the New Zealand farmer and contractor in mind, designed to provide maximum comfort for the operator
- Powerful 6.1 litre 6-cylinder Deutz AG engine with tier 3A compliance (No DPF or diesel additive)
- RC-Shift transmission with 5 ranges and 6 powershifts in each, fully electronic control with manual semi-auto and full-auto shifting
- High-flow hydraulics with 120 L/min closed circuit load sensing hydraulic pump
- 4 remotes for simple hydraulic operation
- Armrest control with multifunction joystick keeps all regular functions in easy reach

UPGRADE TO A 6165 SUMMIT MODEL TO INCLUDE THE ABOVE FEATURES PLUS:

- Electronic remotes with programming
- Professional multi-function armrest
- 50km/h front suspension

UPGRADE TO A STRATO MODEL TO INCLUDE THE ABOVE FEATURES PLUS:

- AgroSky (GPS) ready
- iMonitor 2 fitted
- Climate airconditioning
- Electric dual pane mirrors
- WOLP lighting package

Improve your productivity

Take your tractor to the next level with Deutz-Drive, a range of affordable options to give your farming operation the benefit of precision farming.

Upgrade your existing Deutz-Fahr to improve decision making and improve traceability while enhancing the value of your tractor. Match your farm practices more closely to crop requirements, reduce your farms environmental footprint while boosting performance of your farm by improving management of fertiliser usage, seeding, drilling, planting and monitoring of other farming activities.

- 3 integrated options available
- Suitable for all Deutz-Fahr cabin models
- A range of correction sources available (Autonomous, Topnet Global D, OmniSTAR and RTK)
- ISOBUS compatible
- Section and rate control compatible
- Produce more with less, maximise efficiency and operate more profitably
